

# Mobile Data Policy

Flexible management of employee mobile usage risks. Be confident in the way your corporate devices are used. Enforce acceptable use, eliminate shadow IT, prevent excessive data usage and educate end-users on their usage.

Mobile devices give employees a world of freedom to access any site, anywhere, at any time. That might also mean accessing the wrong sites, in the wrong place and at the wrong time. Addressing this, and ensuring corporate data isn't compromised, is a major challenge in mobility. Wandera solves this by using a multi-level security architecture that applies policy at the cloud level, prevents attacks at the network level and detects threats at the endpoint.

## Acceptable use

Set intelligent rules about which behaviours and sites are considered acceptable with the power to enforce them, Wandera helps you ensure usage is compliant, and reduces legal exposure from illegal or unacceptable use.

## Shadow IT

Enforce your policy such that only sanctioned tools are used for company business, providing you with full confidence on where your data is stored and ensuring compliance with GDPR and other regulations for specific industries.

## Excessive data usage

Set intelligent rules for data usage (including streaming and roaming), and ensure that usage is appropriate, while avoiding unexpected overages.

### > Capping and alerts

Create custom caps when certain data usage thresholds are reached. Set fully customizable real-time alerts and notifications to all users and admins in your organization.

### > Data savings

Reduce growing data consumption in a more user-friendly way. Cut usage by more than 10% by blocking pop-up adverts and banners, and compressing data, without degrading productivity or performance.

### > Roaming

Overseas work is common among most organizations, but it can lead to costly roaming fees. Create and enforce policies that manage usage, based on location.

*"Wandera is really protecting us from some of the risks that quite frankly we thought we were immune to."*

**Naresh Samlal, AVP, IT Support, VITAS Healthcare**

## End-user and admin insights

Our admin portal, RADAR, gives you insight into your mobile usage and brings real-time analytics to your organization - enabling you to make meaningful changes to your policies based on the trends you identify.

Easily educate users not only on security threats, but also on their usage. Insights into their own data usage, data alerts and notifications on behavior such as excessive tethering are all available in the end-user app.

## Define and limit non-business use

Restrict access to entire categories, such as gambling, or for specific domains, meaning you can define and limit non-business usage on your own terms.

You'll be able to categorize internet activity, control roaming and tethering on the endpoint, and see what apps are installed - as well as how much data is used, while staying fully GDPR compliant.

## Fully customizable

Create policies that apply to different groups in different circumstances, and switch devices from one setting to another with ease. You can even apply policy for different device types or geographies.

## Global enterprises protected by Wandera

Trusted by the most security conscious enterprises.

## Industry leading

### Gartner Market Guide on Mobile Threat Defense

- > Full checkmarks across all threat capabilities
- > Largest number of UEM and SIEM integrations
- > Identified as only multi-level provider

### IDC Worldwide Mobile Threat Management Security Software

- > Recognized as a leader
- > Highest rating in customer satisfaction
- > Recognized for in-network capabilities
