

Mobile Threat Defense

Multi-level protection for mobile users, endpoints and corporate data. Security teams worldwide rely on Wandera to eliminate threats, control unwanted access and prevent data breaches.

Two levels of protection, working in tandem

Cloud services and mobility have completely changed the way employees work, providing speed and flexibility in accessing information, but also exposing the enterprise to new threat vectors: mobile-based malware, phishing, cryptojacking, man-in-the-middle attacks, sideloaded and leaky apps. As your employees go mobile, so does your data. A comprehensive mobile security solution needs to address both endpoint and network level threats to provide optimal security.

> Endpoint application

Highly effective endpoint security

Protect against all endpoint threat vectors, from device vulnerabilities to malicious or risky apps, as well as man-in-the-middle attacks. Deploy seamlessly and enforce conditional access to corporate applications through UEM integration.

- > Vulnerability assessments
- > App vetting
- > Threat detection

> Secure Access Layer (SAL)

Real-time prevention of network attacks

Protect your organization, data and people by proactively stopping threats from reaching the device. Block phishing, malware and cryptojacking, and initiate a secure tunnel when under attack.

- > Zero-day phishing protection
- > Privacy-protected browsing
- > Failsafe VPN

Designed equally for security teams and employees

Mobile security doesn't have to mean compromising end-user privacy. Safeguard your employees with encryption so actual data is not visible whether at rest or in motion, while ensuring they don't fall prey to phishing theft of their own personal credentials.

Whatever your device ownership strategy (BYOD, COPE, COBO) our solution is built with privacy at the forefront, with no private data decryption or monitoring of personal data on the device, such as text messaging, emails or photos.

"We have more than 190 locations with 86,000 employees around the globe at SAP. Our first and foremost goal is awareness and transparency. The Wandera solution plays a critical role in our technology stack, providing the security and peace of mind we need to run a global digital business and deliver value to our customers."

Thomas Saueressig, Chief Information Officer, SAP

Mobile Threat Defense Differentiators

> Advanced machine learning

Wandera leads the charge in applying data science to the challenges of mobile security with MI:RIAM, its advanced threat intelligence engine. Because of the solution's unique architecture, MI:RIAM is able to apply the industry's largest data set to identify and eliminate, in real time, all known and unknown zero-day threats.

> Secure Access Layer (SAL)

SAL is Wandera's lightweight mechanism for network-level security. By operating at the network level, Wandera offers real-time security by blocking zero-day threats like phishing sites and malicious domains. Additionally, MITM attacks can be neutralized by initiating a secure VPN tunnel, keeping your users and corporate data safe.

> Any mobile device. Any ownership model.

Wandera supports all devices and ownership models, whether BYOD, COPE or COBO, allowing you to work with your preferred model in a way that is best for your business.

> Unrivalled integrations

With more UEM and SIEM partnerships than any other mobile security vendor, Wandera provides a seamless integration to your security stack.

> Continuous Conditional Access

Wandera integrates with UEM providers to enable continuous conditional access. We communicate device-based risk status to enable organizations to control access to corporate data and applications.

> Real-time insights

Wandera's management portal, RADAR, gives role-based, real-time insights into the threat status of endpoints. By integrating with your UEM, App Insights provides a view of what apps are installed on all devices, the permissions they are given, and the potential threat they pose.

Global enterprises protected by Wandera

Trusted by security-conscious enterprises.

Industry leading

Gartner Market Guide on Mobile Threat Defense

- > Full checkmarks across all threat capabilities
- > Largest number of UEM and SIEM integrations
- > Identified as only multi-level provider

IDC Worldwide Mobile Threat Management Security Software

- > Recognized as a leader
- > Highest rating in customer satisfaction
- > Recognized for in-network capabilities
